

Activity:

The aim of this activity is for children to practise counting to 100. There are three questions to complete. The first two questions allow children to practise the skill, while the third question extends them as they have to problem solve and explain their answer.

Vocabulary:

Place value counters refer to a physical resource which can be used to represent numbers. They are usually in different colours and have different numbers written on them, to represent 'ones', 'tens', 'hundreds' etc. They can also represent decimal numbers.

A **Venn diagram** consists of overlapping circles and can be used to sort sets of data. The data might fit into one category (circle) or into the overlapping area if it fits into more than one category.
