I think that you can make 25 different numbers below 100 because there are 5 different letters altogether.

I think that you can make 30 different numbers below 100 because there are 5 different letters on 6 cards.

Roisin

Investigate whose statement is the most accurate and prove it.

I think that you can make 30 different numbers below 100 because there are 5 different letters on 6 cards.

Roisin

Investigate whose statement is the most accurate and prove it.

There are 45 possible numbers under 100 using the cards above, therefore Roisin is the most accurate as she was closest to the correct amount of possible numbers.
